ABSTRACT

In this article, special attention is paid to the issues of morally and morally mature education of high school students. The specific features of organizing class hours in an invariant way, as well as the advantages of using innovative educational technologies in the educational process, were explained to high school students. Pedagogical principles of organizing the process using the Boomerang technology were presented to upper class students during invariant classroom hours. The main organizers of the educational process in general schools are class leaders and their role in organizing invariant class hours based on innovative educational technologies.

KEYWORDS

Society, state, spiritual, scientific, individual, classroom, educational, moral, education, social, generation, upbringing, consciousness, aesthetic, physical, ideological, political, technology, Boomerang, passion, love, custom, creative.

INTRODUCTION

Personal development is important not only for himself, but also for the development and prosperity of the state and society. Therefore, a society with high morale of its citizens can develop in all aspects.

Education plays an important role in the development of a person. Pupils have a responsible task to

understand the past, remember its lessons, rely on them, be proud of them, and at the same time choose the right path in the future and properly master the perspective.

Therefore, the issue of “strengthening the spiritual foundations of the independence of our country, carefully preserving our national historical values,

traditions and customs, deeply instilling the feelings of love for the motherland and loyalty to independence into the hearts and minds of our people, especially the young generation, is urgent today. is gaining importance” it is noted. In the pamphlet of the First President of the Republic of Uzbekistan I.A. Karimov entitled “Serving the happiness, fortune and great future of our motherland is the highest happiness”.

The national consciousness, national pride, and national pride of our people are growing, and the scientific and spiritual world is becoming richer day by day. This creates an opportunity to strengthen the bright future of our country. Today, the issue of individual spirituality, education of a free person is the most urgent task before us. Current socio-political life is characterized by the fact that it is not physical strength, but psychological characteristics of a person, intellectual potential, intelligence, thinking, and new techniques and technologies that are of decisive importance.

RESULTS AND DISCUSSIONS

By educating students to be strong-willed, to teach them to think independently and creatively, they will contribute to the development of the national economy and the place of our country among the world's advanced technological countries by positively solving the problems expected to arise in the future. they add.

Therefore, it is our goal to make students a perfect human being in every way, educated, intelligent, who will set an example for others with their actions and should be done in this regard. for the realization of the goals, it is an urgent issue of today that we radically reform the classroom hours conducted in general education schools in terms of content and quality, and organize them at the level of the requirements of the era and time.

In class hours, not only giving an understanding of the Motherland, independence, patriotism, parents, teachers, friendship, ancient values, traditions, enriching each lesson with valuable information, interesting and meaningful events, the student it is necessary to achieve the elevation of consciousness.

As a result of the implementation of the national program, it leads to the formation of an independent thinking person in the society. The increase of such a person creates a system of conscious living in society. Spiritually rich, independent-minded, and broad-minded people cannot be influenced by any impure power, corrupt ideas, empty slogans, or appeals.

The Uzbek people have set themselves a huge goal of building a legal democratic society. Many steps have been taken and are being taken towards this goal. Today's development of the world is at such a stage that the decisive force is not in the military potential, but in the intellectual potential, thought, mind and advanced technologies. The wisdom of the First President of the Republic of Uzbekistan, I.A. Karimov, “Strength is in knowledge and thought” is spoken for today and tomorrow.

In fact, humanity has emerged, and the concept of “Education” is the most urgent issue of human society for centuries, and it has kept its essence and importance.

Therefore, it is time to implement reforms related to youth education and educational processes, to develop optimal options for organizing class hours.

Enriching, improving and improving the content of the application of modern pedagogical technology to the educational environment The comprehensive planning of the project is aimed at solving these problems. The class strives to innovate, and strives to create a new success. Modern pedagogical technology is used in the classroom, and self-analysis and self-reflection of the

study is done. Class management and learning are active or motivated. Nowadays, science and technology not only apply to a large number of fields of work, but also modern technology in the field of economics, humanities, and education to demand work. It is known that “National training” means “providing the educational process with advanced pedagogical technology” and continuously improving the quality of education. The second and third steps are a serious task. The quality is marked.

Innovative education is a way to prepare for work in the future institution, and first of all, to improve the basic education and improve the new approach. In it, it is possible to achieve a new level of quality in education, to achieve high efficiency, and to focus on creativity, and to raise the quality of education to a new level, as well as a modern approach to education organizing it provide. Innovative education provides an opportunity to engage in modern educational technology. Innovative technology is useful for teaching and learning activities as well as innovation, innovation, and its implementation in an active and effective way. The role of the teacher in active learning leads partly to direct the students' activities to achieve the lesson goals.

The importance of a properly organized spiritual-logical training is that it strengthens and enriches the relationship of the team. The basis of the organization of this organization is the general interest of the community, the right attitude to the criticism, and the good news. The ability to create and manage content has been created.

“Boomerang” technology is to enable students (or students) to work with various literature and texts during the lesson, outside of the lesson, to memorize the learned material, to speak it, to express their opinion freely, it is aimed at getting a lot of information

in a short time and being able to evaluate all students by the teacher during the lesson.

The goal is to control and evaluate the extent to which the didactic materials distributed during the educational process are mastered by students individually, in groups and in public, as well as through discussion and various questions. During the process, it is to create an opportunity for each student to get his own grades (points).

The use of technology can be used individually, in small groups and as a team in practical training, seminar or laboratory training, as well as in conversation-discussion classes.

Tools used in training. Handouts and didactic materials (short texts, pictures, information on a previous topic or a new topic) intended for the student to read, learn and master independently during the lesson.

Training procedure:

students are divided into small groups;

students are introduced to the purpose and procedure of the lesson;

texts on the topic are distributed to students for independent study;

the given texts are studied individually by students;

a new group is formed from the members of each group;

each of the members of the new group exchange information with the texts they have learned independently within the group, that is, they talk to each other and master the text;

internal control is carried out within the group in order to determine the level of assimilation of the given information, that is, group members answer questions with each other;

members of the new group return to their original group;

during the rest of the lesson, a "group accountant" is appointed in each group to evaluate students' knowledge or calculate their points;

in order to determine the extent to which the students have mastered all the texts, the teacher asks the students questions and conducts an oral survey;

each group member prepares one question, relating the content of the text in the group to life;

a question-and-answer session is organized through questions prepared by groups ("group accountants" calculate points based on the given answers);

the winning group is determined based on the sum of the total points collected by the group members.

The recommended innovative methods, legislation and teaching methods of the teacher, his pedagogical activity, professional knowledge, skills and competence serve as the basis of a new approach to education in general education. In general education schools, it is very important to develop high-class education from a moral-ethical point of view, to adopt an innovative approach, and to do so.

CONCLUSION

We should enrich the class hours with content and organize them at a high level. If we manage to explain each topic in detail and absorb it into the student's consciousness, the students will look forward to the next week's class hours. In this process, students will be able to express their opinion, make their appropriate contribution to the process, and thus develop patriotic feelings in students, and the image of a perfect person, a qualified person that we dreamed of will appear.
